

# Drum Racking Bund

Product Code: BA772

There is a simpler and safer approach to storing liquids in racking - our Bunds Australia Poly Racking Bund. These units have a unique design which fits both 900mm racking and 1200mm racking (with the use of 100x50mm bearers). Its 220L bund capacity meets the regulation for safe storage of up to 4 x 205L drums which specifies bund must contain 25% of the aggregate volume of liquids kept.

Our racking bund protects items stored underneath by containing spills to a single pallet, preventing further damage and contamination below. This is ideal for warehousing liquids, especially those out of direct sight where spills/leaks can occur undetected.

Capable of storing containers from 5L up to 205L, such as oil, coolant, chemicals and more.

Embossed markings for correct installation orientation.

Pallets can be easily lifted in with forklift, creating easy and effective storage.

Load limits are dependant on racking (and also the quality of pallet used) as the weight of the pallet is transferred directly to the racking.

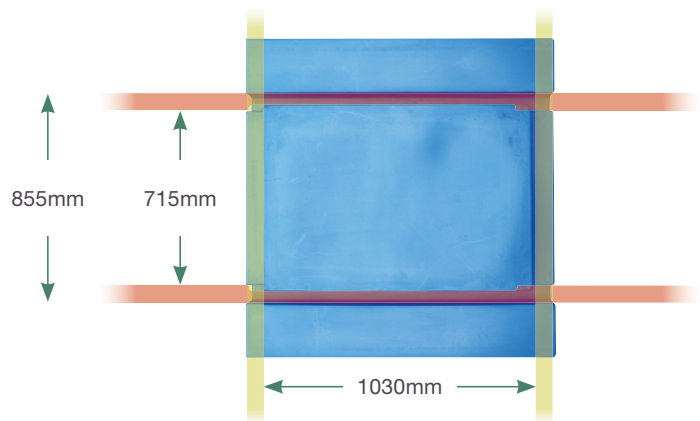

Enclosed lip ensures pallet is held in place and remains in a contained location.

*Note: Pallet, drums and rack pictured are not included.*

## SPECIFICATIONS

Product Code:	BA772
Dimensions:	1300mm L x 1300mm W x 280mm H
Bund Capacity:	220L
Weight:	20kg

## Underside Racking Orientation

100 x 50mm bearers required to disperse storage weight to racking (can be supplied).
